"Pansies Are My Favorite Flower!"

E ARE receiving inquiries from all parts of the country asking for the name of a grower nearby who can supply Steele's Jumbo mixed plants. Perhaps you are that grower. Have you enough plants to supply his requirements? How about next year? Are you planning to buy enough seed to supply the increasing demand for Steele's Mastodon strains?

We are advertising our pansies so that you may sell more of them. We shall have plenty of seed to supply our valued customers with all the stock they can grow. Our advertising campaign has just begun but we shall continue to advise readers to see their local florist or seed dealer for Steele's pansies. Are you growing enough pansies to care for this increased demand?

Your customers must stay at home to conserve gas, tires, and travel facilities for the armed forces. They will demand more and better flowers and Steele's pansies will charm and delight them and bring them back to you year after year. Plan to increase your planting of pansies to take the place of those imported varieties which you cannot now obtain.

We invite comparison with other strains so make your own test this year but be sure to plant enough Steele's Mastodons to supply the demand.

Preparing Bed for Germinating Seed

- 1. Have your soil clean and pulverized to a depth of six or more inches.
- 2. On the level surface spread evenly a layer of pulverized manure, compost preferred, to depth of at least one inch.
 - 3. Overlay manure with half inch of the best soil you have, thoroughly pulverized.
 - 4. Rake down and tamp surface true and smooth.
 - 5. Soak down the bed several inches.
 - 6. Sow in drills or broadcast—drills are better.
 - 7. Cover as lightly as possible with your best soil or sand, mixed 50-50 with peat moss.
 - 8. Use spray of water to moisten surface, after light burlap cover is on.
 - 9. Allowing plenty of ventilation, keep your beds moist, quite moist, but not soaking wet, until plants come up.

We use cheapest grade of burlap to retain moisture. As soon as plants begin to come through freely we remove burlap permanently, and sift tops of beds with thin layer of peat moss. To avoid damping off, water young seedlings **VERY SPARINGLY**.

Never allow your beds to become dry. Any dryness after seeds sprout is absolutely fatal. These directions are for sowing in the open field, but will apply when using flats or cold frames. **WE USE 125 TO 150 SQUARE FEET TO SOW AN OUNCE OF SEED BROADCAST.**

CAUTION—Alternate your pansy crop with some other crop.

THE UNUSUALLY HIGH GERMINATING QUALITIES OF STEELE'S MASTODON PANSY SEED is a revelation to all extensive growers who use our stock.

Owing to uniformity required in producing separate colors, the average size is not equal to the types of flowers found in our mixtures. We strongly advise mixtures for your main crop, and you save money thereby.

No. 1 Diener's Ruffled Monsters in 3-inch pots, 12 weeks after sowing

DIENER'S PETUNIAS

Over eight thousand florists raised our Petunias last year and we have heard nothing but praise of their high quality. All of our seed bearers are first raised in 3-inch pots and must conform to the type you see in the accompanying picture of this catalog. This makes the producing of the seeds more expensive, but results in the high quality of our seeds. Every plant is dwarf and stocky, no pinching or staking necessary and they sell at sight. Over 500 seeds per trade packet.
